WEATHER SYNOPSIS BY REGION

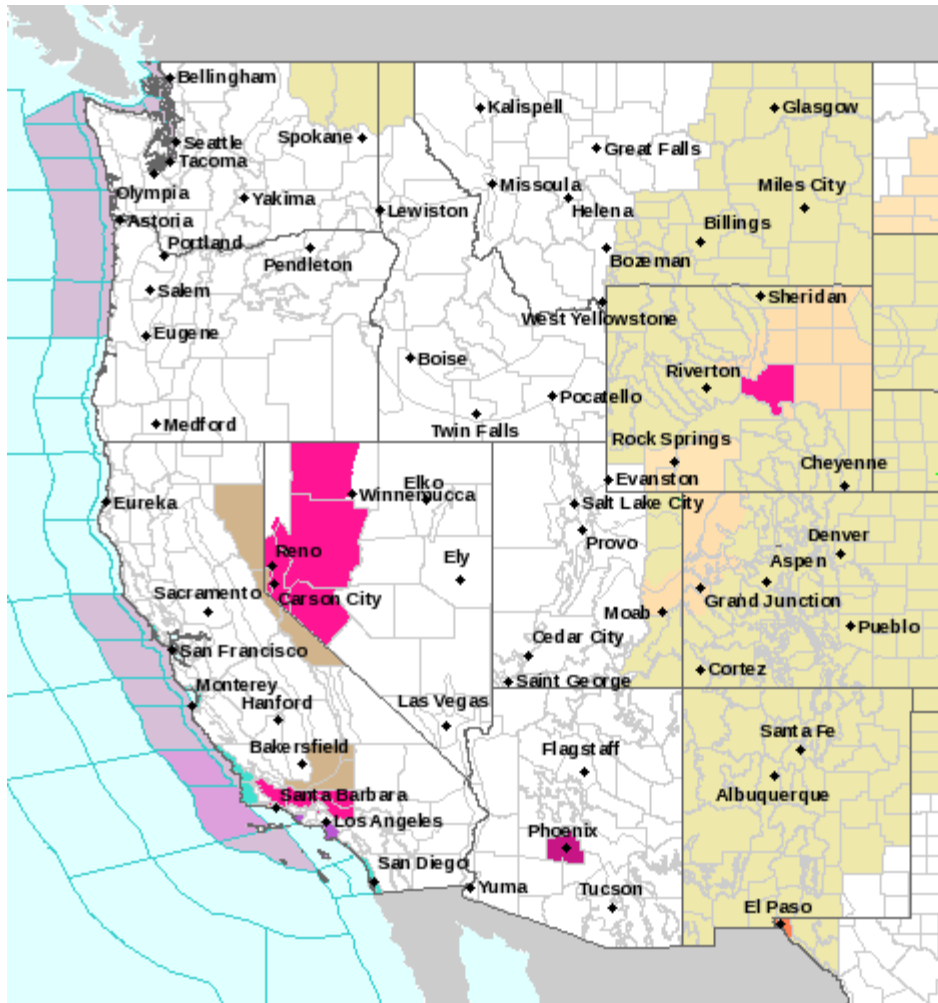

NORTHERN CALIFORNIA

A series of troughs will move into the Pacific Northwest during the next few days which will help to weaken the ridge of high pressure over the Desert Southwest. As a result, cooler weather can be expected across the region today as onshore flow strengthens throughout the district. Areas of night and morning low clouds and fog will return to the coastal areas during the next few days with only partial afternoon clearing along the immediate coast. Daytime highs will be in the 90s to near 100 in the inland valleys, 80s to near 90 in the mountains, and around 112 across the lower and eastern deserts. Humidity values will be in the single digits and teens across the interior areas of the central coast as well as over the deserts. Elsewhere minimum humidity values will be in the 20-35% range except for some teens in the mountains. Winds will be southwest to northwest 10 to 18 mph across the coastal and valley areas during the afternoon and evening hours with speeds of 15 to 30 mph across the Antelope Valley, the Tehachapi Range, and the Banning Pass during the next few days. Surface pressure gradients will turn offshore towards the end of the work week with gusty northerly winds developing once again across the Santa Ynez Mountains eastward into the I-5 Corridor area tonight through Saturday morning. The strongest winds during this period are expected to occur Friday evening through early Saturday morning. In addition, some valley areas of Ventura and Western Los Angeles County could see some breezy northeast winds developing by Saturday morning. High pressure over the Desert Southwest will begin to build westward into California later in the weekend and into most of next week. This will mark the beginning of another heat wave across the region, although temperatures will not be quite as extreme as compared to this previous hot spell.
